REMOTE LEARNING

title:

The Remote Learning Experience
IT IS NO LONGER NECESSARY FOR THE INSTRUCTOR AND THE STUDENTS TO BE IN THE <u>SAME</u> LOCATION

Train your employees no matter where they are located ...

duration:

1-2 Days

brief:

Threshold Systems now offers all of its classes as part of a remote learning experience wherein a course is taught employing a remote video link between the students and the course instructor.

Remote Learning
THE SENSIBLE SOLUTION FOR BUSY PROFESSIONALS

objective:

The landscape for technical instruction is rapidly shifting away from traditional instructor-lead classroom learning and toward a distributed learning experience whereby the instructor and the students can be in different locations. This learning solution eliminates high cost and inconvenience associated with having students travel to one location for a day of instruction. It offers a flexibility and a convenience that traditional classroom instruction does not have. It is ideal for companies with a global business model and whose employees are scattered around the world.

appropriate for:

Device, test and process engineers, design engineers, equipment and failure analysis engineers, application and product engineers, managers and any busy professional who requires technical training but whose time is limited.

benefits:

Remote instruction offers:
- elimination of instructor travel costs
- elimination of employee travel and lodging costs
- minimal disruption of employee work schedules
- the students do not all have to be in a single location. Remote Learning permits student attendance even if they are located in different countries.
- unlike watching streamed video, remote instruction closely simulates the classroom experience and permits student questions and real-time student/ instructor interaction

the details:

How it works:
Threshold Systems Remote Learning employs either the Cisco TelePresence system or Citrix GoToTraining. It requires that the customer have a high-speed internet connection. A Threshold Systems technician will contact the customer the day before the class to test the connection and resolve any technical issues.

The students are provided with the same high-quality color class notes that Threshold Systems is famous for and the course is taught by an instructor who has over 25 years of hands-on experience in the semiconductor industry.
